- Endicia calculates the exact postage you need so you don't overpay for postage or have packages arrive postage due
- With Endicia, you can print complete, prepaid postage for any single-piece, domestic mail class offered by the USPS
- Endicia's complete pre-paid shipping labels include address verification to avoid returned mail and speed delivery
- Discounted Delivery and Signature Confirmation save you money with every package

Endicia Internet Postage is a service from Envelope Manager Software, a leader in desktop mail software with over 20 years of experience in the postal industry. Our team received the prestigious Quality Supplier Award from the USPS in 1989, and our Envelope Manager products have been a corporate standard for address hygiene and bar-coding at the USPS since 1993.

Envelope Manager Software's mission is to provide leading technology to the mailing industry. We were the first company to offer Windows-based presort mail software, WYSIWYG mail piece design software, Internet address verification, Internet move updating, Internet Postage with Electronic Delivery Confirmation and Internet Postage with International Mail.

We invented and patented technology for remote address verification, the personal postage system and the virtual postage meter.

Endicia Internet Postage is a service that allows users to print complete, postage-paid USPS shipping labels for domestic and international shipments. These shipping labels include discounted Delivery/Signature Confirmation, discounted private insurance and hidden-postage amounts. Endicia needs only a PC, and Internet connection and a laser or inkjet printer—no hardware to lease or install.

# What can iabol with Endicia do for you?

Endicia has partnered with iabol software's shipping solution, iabol, to allow customers to generate automated shipping labels with free delivery confirmation and 'stealth' postage for any computer with a web browser and printer. No complicated software download or installation is required.

By combining Endicia Label Server API with the multi-carrier capable iabol, the USPS products like Priority Mail and Express Mail become a real alternative to higher priced services from other carriers, especially for smaller companies.

The Endicia Label server uses state-of-the-art XML Web Services, which allow iabol to support USPS shipping without forcing end users to install new software or change their workflow. The system produces an integrated label image, complete with postage, deliver and return addresses, and Delivery Confirmation or Express Mail barcodes.

## iabol Integration Features

- **Local Integration**  
ODBC (access and ODBC compliant data while processing a shipment for lookup or write back) and abolSync (connects existing data sources and map your data to the existing iabol data structures)
- **Supported Plugins**  
Outlook 2003 & 2007, Flatfile (csv), ODBC
- **Central Integration**  
FTP: send order or shipment to ftp.iabol.com for upload (sFTP also available). Web Services: use iabol API to 'push' order or address book. Contact info@iabol.com for API specs.
- **XML Web Services**  
iabol's full feature API allows you to ship, manifest track and load data, making it easy to enable your internal systems or websites to ship with multiple carriers. Contact info@iabol.com for more information.
