Endicia's SCAN Form for USPS

Endicia's SCAN (Shipment Confirmation Acceptance Notice) Form is an extremely useful tool for iabot 2.0 users who ship parcels with USPS. After closing out your parcels shipped for the day, the SCAN Form generates a customized notice which consolidates all USPS shipments for the day into one document with a barcode.

The barcode contains information about how many packages you are shipping for the day, as well as your shipper information. When a USPS driver picks up your packages (or you drop them off at the Post Office), the Postal Service scans the SCAN Form barcode and checks the number of packages against the form.

Once complete, your packages are accepted into the USPS Package Tracking System (PTS) and each tracking number now shows the date and time of the acceptance process!

If you haven't added Endicia to your list of carriers in iabot 2.0 yet, what are you waiting for? Just [login](#) and go to **Shipping Site Manager** → **Add a Carrier** to get started.
